LOWER IDLE TORQUE TEST*

* The Lower Idle Torque is the amount of torque required to twist the screw to tighten the clamp (lower is better).

DESTRUCTIVE-TURNING TORQUE TEST**

** The Destructive Turning Torque Test measures how much force is required to break the hose clamp (higher is better).

CLAMP JACKETS

The unique sleeve design allows the Clamp Jacket to slip over the tail of a hose clamp to provide a worker protection from cuts and abrasion from exposed clamp tails.
